

Summary Report: Abnormal Typing Speed Instances

1. **Date:** April 27, 2024

- **Time:** 10:30 AM
- **Abnormality:** Typing speed increased by 25% compared to average.

Analysis: The user's typing speed showed a significant increase, which may indicate a deviation from their normal typing behavior. Further monitoring is recommended to assess the consistency of this change.

2. **Date:** April 27, 2024

- **Time:** 3:45 PM
- **Abnormality:** Typing speed decreased by 30% compared to average.

Analysis: The user's typing speed significantly decreased, suggesting a deviation from their usual pattern. This change could be indicative of external factors affecting typing performance or a change in the user's behavior.

3. **Date:** April 28, 2024

- **Time:** 9:15 AM
- **Abnormality:** Typing speed increased by 40% compared to average.

Analysis: A notable increase in typing speed was observed, indicating a potential deviation from the user's normal behavior. Further investigation is warranted to understand the cause of this change and its implications.

4. **Date:** April 29, 2024

- **Time:** 2:00 PM
- **Abnormality:** Typing speed decreased by 35% compared to average.

Analysis: The user's typing speed showed a significant decrease, suggesting a departure from their typical typing behavior. This change may warrant attention to identify any underlying factors contributing to the deviation.
